IDI Results System 2024-26

Introduction

The IDI results system supports measurement of implementation of the IDI Strategic Plan 2024-29, and contribution to IDI's vision. As illustrated in the diagram below, the activities and initiatives of each IDI work stream, coupled with the enablers of performance improvement, help achieve IDI's three strategic priorities and thereby facilitate SAIs to improve their performance and contribute to better societies and improved lives.

Of course, societal change and improving the performance of SAIs are complex endeavours, influenced by diverse factors including country political economy, institutional environment, SAI culture and leadership, and the adequacy of SAI resources. For sustainable SAI change, many factors need to come together. In its new Strategic Plan, IDI emphasises the importance of building sustainable practices within SAIs. This implies the capacity to consistently deliver quality results against the SAI mandate and meet stakeholder needs both now and in the future. It requires a supportive institutional environment, effective SAI leadership, functioning organisational systems across audit and governance practices, and sufficient, well-managed human resources, including the capacity to continually recruit, develop and retain professional staff.

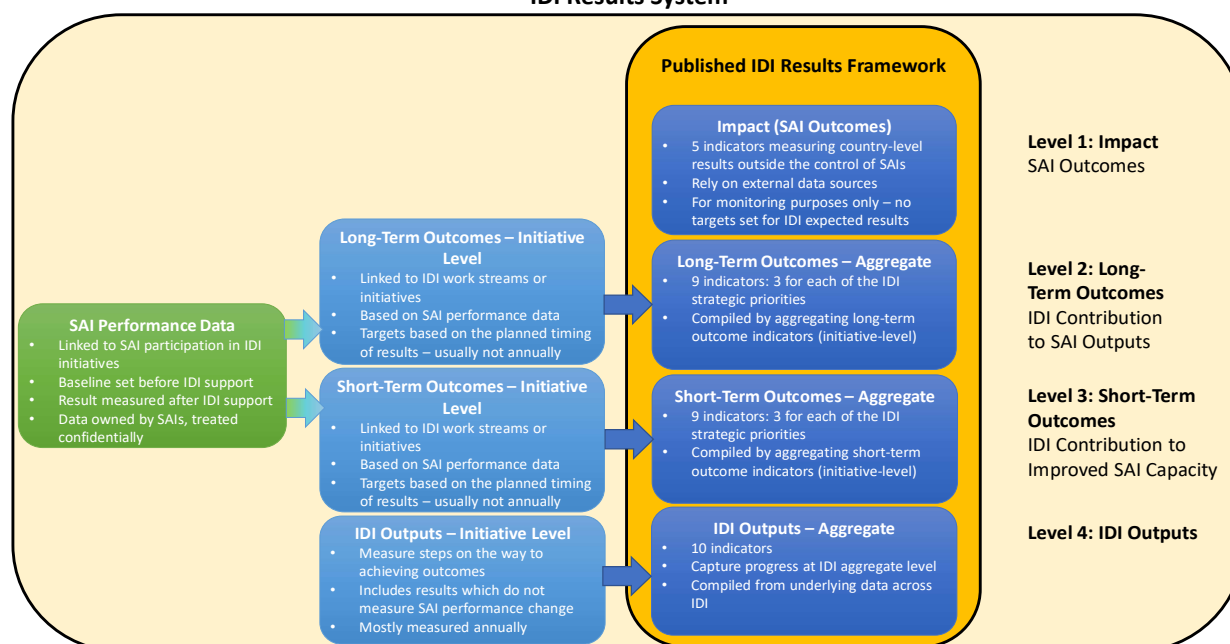

IDI's results system does not attempt to capture the complex inter-relations between all these factors. Rather, it seeks to measure whether IDI's work is making a difference to performance across these areas amongst the SAIs participating in relevant initiatives.

About the IDI Results System

IDI has developed a four-level results system. The system includes measurement of performance at the SAI-level, as the basis for measuring performance of IDI initiatives, which is then aggregated to an overview of performance at the IDI level. The overall results system is shown below. As the entire results system comprises over 100 indicators, an IDI Results Framework is presented which focuses on impact indicators, aggregate outcome indicators, and selected IDI output indicators. From this, 12 outcome indicators (for 2024-26) and 12 output indicators (for 2024) are identified as Key Performance Indicators (KPIs) the IDI Operational Plan highlights document.

The remainder of the indicators in the results system are shown in an Annex to this document. Those related to individual IDI work streams also appear in the relevant IDI Operational Plan Appendices.

IDI Results System

Four Levels of Results

Impact: Indicators related to changes at the country level to which SAIs contribute, such as action on audit recommendations, compliance with laws and regulations, public trust in government, and stakeholder engagement in accountability. IDI monitors these indicators as they are within its sphere of concern but does not set targets as they are so far removed from IDI's influence.

Long-Term Outcomes: Indicators where the expected result of an IDI initiative is a measured, direct improvement in the outputs of participating SAIs, against a defined benchmark. This includes SAI reporting and publication, quality and coverage of SAI audits, and engagement with external stakeholders. IDI has some influence on these indicators, though they rely heavily on factors under the control or influence of SAIs.

Short-Term Outcomes: These indicators focus on intended SAI capacity improvements to which IDI initiatives contribute. This includes SAI institutional capacity, organisational systems capacity and professional staff capacity. These lie within IDI's influence but not under its control.

IDI Outputs: These indicators measure results over which IDI has significant but not absolute control. It includes intermediate steps carried out by an SAI (with IDI support) which are part of efforts to enhance SAI performance, but do not on their own constitute a performance improvement. It also measures IDI's internal results, such as overall participation of SAIs, SAI teams and SAI staff in IDI initiatives, progress in becoming a more sustainable and efficient organisation, mobilisation of in-kind support, and IDI's partnerships with and support to organisations other than SAIs.

IDI outputs are mostly measured on an annual basis, providing a useful measure of progress on implementing IDI's annual Operational Plans. Long and short-term outcomes are measured only when expected results are due – in most cases at the end of IDI's support to the SAI or group of SAIs. Progress on the five impact indicators will be updated each time the underlying data is produced by the relevant external organisation.

The IDI Results Framework

This presents an overview of results at the IDI level. Long-term and short-term outcome indicators from all IDI initiatives are aggregated to show IDI's contribution to SAI performance change across the three strategic priorities (each broken down into three-sub priorities). It also includes the five impact indicators, and ten selected IDI output indicators. The results framework is designed to be resilient and adaptable: as SAI needs change, and new initiatives are launched, new indicators can feed into the existing aggregate indicators. Therefore the 33 indicators in the results framework should not change over the duration of the IDI Strategic Plan. The IDI Results Framework follows over the next few pages.

Annex 1: Other Indicators in the IDI Results System

The Annex shows the broader IDI results system, including indicators at the IDI work stream and initiative level. They are consolidated here for completeness and can also be found in the Operational Plan appendices for each IDI initiative. These will be added to as new initiatives are launched. The initiative level outcome indicators measure IDI contribution to changes in SAI performance, and are therefore based on SAI-level performance data, which is owned by the SAIs, and recorded in IDI's information management system. These are not shown in the published IDI Results system.

IDI sets targets for all indicators except impact indicators. Targets take into consideration the latest baseline data from before 2024. Regarding outcome indicators, the targets aspire to be realistic. This means reflecting how many SAIs may participate in an initiative; that some may leave during the initiative; some may not fully adopt or implement the ideas or products from the initiative; some may not achieve an improvement in their underlying performance; and some may not measure their performance at the end of the IDI initiative.

The overall results system will be subject to continual maintenance. New indicators may need to be added to reflect new initiatives. Indicators that become redundant will not be removed but may be marked as inactive. Technical changes to indicator definitions may be made to reflect details of the underlying measurement system, but further changes will not be made after the first time the indicator is measured – rather, old indicators should be marked as inactive and a new indicator added as replacement. Indicator targets may evolve to reflect future IDI annual Operational Plans which impact initiative delivery. This is natural due to changes in resources and emerging priorities. However, any such changes must ensure:

- Changes to future targets are included in an IDI Operational Plan or mid-year Operational Plan adjustment (recording the reason for and nature of the change)
- Indicator targets are not changed in an IDI Performance and Accountability Report (PAR) or in an Operational Plan for a later year (i.e. no using the 2025 Operational Plan to change a 2024 target)
